

FOR LAW FIRMS

3 signals your firm is *leaking billable hours*

None of these show up on a P&L until the quarter is already over. Here is what to check this week.

Missed Calls

After-Hours Intake

Billing Accuracy

Where the hours actually go

A partner takes a call from the car, handles it, and never enters it. Multiply that by every fee earner, every week.

A prospective client calls at 7 PM, gets voicemail, and calls the next firm on the list instead.

Time entries written up two weeks later are shorter, vaguer, and lower than the work actually justified.

HOW ZENITH FIXES IT

One system, running quietly in the background

THE PATTERN

It is never one big leak

It is a dozen small ones, each easy to justify on its own, that add up to a full day of billable time a month per fee earner.

WHAT WE FOUND

Reconstructed billing loses detail, and detail is what survives an audit

18%

average time-entry
shrinkage when logged
more than 48 hours after
the work

That gap compounds. A firm billing 2,000 hours a month at \$350/hr is leaving real revenue on the table before a single new client walks in.

We build the AI team that closes these three leaks

Missed-call text-back, after-hours intake, and billing reconstruction, running as one system inside your firm.
